

Innovasan Adds Technical Expertise to Advisory Board

For Immediate Release

Release Date:

Monday, June 13, 2016

Knoxville, TN –

Dr. Steven Ripp, Chief Operating Officer of 490 BioTech and head of the University of Tennessee’s Center for Environmental Biotechnology has joined Innovasan’s advisory board along with staff research associate Dan Williams.

“Dr. Ripp and Dan Williams will play an integral role in the continued development and execution of Innovasan’s microbiology testing program.”

Dr. Ripp and Dan Williams will play an integral role in the continued development and execution of Innovasan’s microbiology testing program. Additionally their expertise will be used to publish data from the studies that Innovasan is conducting with its Gauntlet Disinfection System Alpha Prototype.

“The microbiology test program will continue to evolve as we move through our beta-site program and ultimately enter the market with Gauntlet. We will continuously expand the range of viruses and bacteria that are treated in Gauntlet. Dr. Ripp and Dan Williams make strong additions to our team with deep technical expertise in this space,” said Jeff Hubrig Jr.

About Innovasan:

Innovasan’s purpose is to transform global health by eliminating water pollution. Med-San® is the only solution for the cost effective, on-site treatment of infectious fluid medical waste from hospitals and other medical treatment facilities and is recognized by the U.S. Army Medical Research and Material Command and the American Institute of Biological Sciences as a disruptive innovation. Innovasan is transforming the disposal of fluid medical waste with a solution designed for people and the planet.
